- ▶ Spezifität  $1 - \beta = \text{Prob}(\text{negativ} \mid \text{nicht infiziert})$

## Take-Home Messages

- ▶ Separation between **infection** and **data dynamics**

## Take-Home Messages

- ▶ Separation between **infection** and **data dynamics**
- ▶ Data used to **calibrate** the base reproduction numbers and IFRs

## Take-Home Messages

- ▶ Separation between **infection** and **data dynamics**
- ▶ Data used to **calibrate** the base reproduction numbers and IFRs
- ▶ **Wave peak** if contamination  $\approx 20\%$ : No herd immunity but sufficient for mild measures to be effective

## Take-Home Messages

- ▶ Separation between **infection** and **data dynamics**
- ▶ Data used to **calibrate** the base reproduction numbers and IFRs
- ▶ **Wave peak** if contamination  $\approx 20\%$ : No herd immunity but sufficient for mild measures to be effective
- ▶ As flu, there is a strong **season dependence** (Peru, Australia)
